

Infrastructure & Energy Expertise

Recognised as one of the UK's leading law firms for the energy and waste sectors, we've worked on many of the UK's largest waste and energy-from-waste PFI and merchant projects. Our clients include local authorities, project sponsors, contractors, waste suppliers, technology suppliers, ash processors and heat and power offtakers. We also act for funders, developers, owners and operators on merchant projects and contracting in the waste and anaerobic digestion sectors including the UK's largest owner-operator of biomethane projects, and we've acted on high profile EPC contract disputes in the energy from waste sector.

Through our dedicated Infrastructure & Energy team we provide sector expertise across the full range of legal disciplines involved in the waste and wider energy sector, from site acquisition, title due diligence and grid connections through planning, permitting, funding, corporate structures, procurement and contracting, construction/EPC, O&M, power purchase and offtakes, regulatory compliance and dispute resolution, to project decommissioning or corporate disposal.

Our Infrastructure & Energy team also specialises in renewables, PPAs, private wire networks, battery storage, EV charging infrastructure, voluntary carbon markets, heat networks and carbon capture use and storage.

Areas of Expertise

- Projects and project finance
- Power purchase agreements
- Leases
- Planning and permitting
- Regulatory compliance
- EPC and O&M
- Supply and offtake
- Mergers and acquisitions
- Procurement and contracting
